

The arts in Austria

Business in Belgium

Science in Switzerland...

Erasmus for All makes education and training a lifelong journey of discovery across borders and cultures, creates opportunities for young people starting their careers and fosters innovation, productivity and growth in the world's markets.

Be part of it all

It is now time to think about potential applications and partnerships while we wait for application deadlines and funding criteria to be finalised.

To stay informed of developments and opportunities, register your interest now.

A world of possibilities

**Erasmus for All
2014–20**

Opportunities for collaborative
degrees with 30 countries

The start of tomorrow's success stories

In response to an analysis of the European Commission's Lifelong Learning Programme, **Erasmus for All** will provide opportunities for collaborative degrees with 30 countries. The initiative is much needed.

Education and training are more important than ever for innovation, productivity and growth, especially in the current economic climate. Yet the potential of Europe's human capital remains underexploited.

More needs to be done to make sure education and training systems deliver the knowledge and skills needed in an increasingly globalised labour market, making lifelong learning a reality for all. The role of education and training as a route to employment, also through traineeships, is particularly important for young people who are hardest hit by these challenging economic times.

Programme overview

Erasmus for All will:

- ▶ increase coherence of, and strengthen, the lifelong learning approach by linking support to formal and non-formal learning throughout the education and training spectrum
- ▶ broaden the scope for structured partnerships, both between different sectors of education and with business and other relevant parties
- ▶ provide flexibility and incentives so that budget allocation between activities, beneficiaries and countries better reflects performance and impact.

Programme opportunities

Joint and Double Degree Projects

Erasmus for All builds on the success of Erasmus Mundus, which has been implemented with industrialised countries. The new Programme will strengthen support for degree mobility within joint high-quality study programmes, delivered by EU and non-EU universities.

This action will be open to additional funding from interested partner countries. The Commission has set up a programme for cooperation with industrialised countries, which funds joint and double degree projects, joint mobility projects and policy activities.

Participating countries

<u>Australia</u>	<u>Korea, South</u>
<u>Austria</u>	<u>Luxembourg</u>
<u>Belgium</u>	<u>Mexico</u>
<u>Canada</u>	<u>Netherlands</u>
<u>Czech Republic</u>	<u>New Zealand</u>
<u>Denmark</u>	<u>Norway</u>
<u>Finland</u>	<u>Poland</u>
<u>France</u>	<u>Portugal</u>
<u>Germany</u>	<u>Slovakia</u>
<u>Greece</u>	<u>Spain</u>
<u>Hungary</u>	<u>Sweden</u>
<u>Iceland</u>	<u>Switzerland</u>
<u>Ireland</u>	<u>Turkey</u>
<u>Italy</u>	<u>United Kingdom</u>
<u>Japan</u>	<u>United States</u>

Joint Degrees at Doctoral Level

Focus is now on priorities which will increase EU added value and systemic impact. Consequently, the actions that gain support will be those that contribute to the efforts of achieving more jobs and growth in line with Europe 2020 objectives. Significant economies of scale are possible if actions of a similar nature share implementing rules and procedures, simplifying the work both of beneficiaries and management bodies. **Erasmus for All** will address current weaknesses identified in evaluations and enhance synergies with other sources of EU funding.

In particular, while the new Programme will concentrate on various actions with a transnational character, the structural funds will support national and regional efforts in a number of key areas including:

- ▶ modernising education establishment infrastructure
- ▶ supporting the upgrading of skills and training as well as mobility of people in the labour market
- ▶ increasing access so that under-represented groups can benefit from education and training.

Marie-Curie actions under Horizon 2020 will support researchers' mobility. To fully exploit synergies with Horizon 2020, joint degrees at PhD level will be taken forward exclusively by Marie-Curie actions.
